What to expect

Crypto assets and digital securities, based on digital ledger technology, have faced a lot of hype and a lot of scrutiny in recent years. Are they the future of financial markets, or a solution in search of a problem? In these seminars, you will learn what makes web3 and the metaverse so interesting, why crypto assets and tokenised securities are considered by some to be such important pieces of financial infrastructure and what else decentralised ledger technology has to offer.

This seminar series is organised in collaboration with the Frankfurt School Blockchain Center (FSBC). The FSBC is a think tank and research centre focused primarily on investigating the implications of blockchain technology. In addition to general research and prototype development, the FSBC serves as a networking hub for managers, startups and experts to exchange knowledge and best practices.

Ideal for

Employees and decision-makers from the financial sector who are interested in blockchain technology or who want to enter the market of crypto assets. Innovation managers, CIOs and CDOs, IT strategists, executive managers and experts in business administration, as well as individuals who would like to learn more about crypto assets and blockchain systems. Employees of startups with digital business models. Lawyers and consultants with a focus on capital market law and digitisation.

Requirements

Participants should have heard about blockchain and crypto assets such as Bitcoin and Ethereum. All participants should bring laptops with them.

In-house programmes

All our specialist courses are also available as customised programmes. Please ask us for a quotation.
